Can type 1 diabetes be prevented? You can help answer this question!

Screening available June 9th Mary Bridge Endocrine Program Parenting Children with Health Issues

If someone in your family has type 1 (autoimmune) diabetes, you and other family members are *ten to fifteen times* more likely to develop the disease. TrialNet, a federally funded research program, is offering free risk screening for the presence of autoantibodies that may appear years before type 1 diabetes develops. If found to be at risk, you will be closely monitored and may be eligible to participate in a prevention trial.

You are eligible to participate in this screening if you are:

- Between the ages of 1 and 45 years with a sibling, child or parent with type 1 diabetes or.
- ☐ Between the ages of 1 and 20 with a **cousin**, **uncle**, **aunt**, **niece**, **nephew**, **grandparent or half-sibling** with type 1 diabetes.

Please visit our website at www.TrialNetPathwayToPrevention.org

For more information about free risk screening, or to schedule an appointment, call 800-888-4187 or e-mail diabetes@BenaroyaResearch.org
