PREPARE CONVALESCENT PLASMA FOR COVID-19

TRANSFUSE CONVALESCENT PLASMA FOR COVID-19

Routine, Bedside Verification: Before Administering the unit, verify in the patient's presence - (1) The patient's name and medical record number (MRN) are identical on the Unit Compatibility Label, wrist band(s), and Transfusion Record. (2) The blood type and the donor unit number on the Transfusion Record, Unit Compatibility Label and donor unit are identical. (3) The unit is normal in appearance and has not expired (4) The RBC units: the blood bank identification number is identical on the Transfusion Record and the patient's blood bank identification system Securiline armband.

- ❑ To release the Blood Product in the Transfuse Release Report Window from the Blood Administration Flowsheet, locate the **Transfuse Convalescent Plasma for COVID-19 Product**, and Click **Release**

- ❑ The blood product label for Convalescent Plasma for COVID-19 looks like this. **MANUALLY ENTER the handwritten expiration date** (new date because the product is THAWED)

- When you scan the Convalescent Plasma product, like your normal blood administration workflow, you will see the Name of the Product display as **TRANSFUSE CONVALESCENT PLASMA FOR COVID-19**, and the Product Name field will scan as “Thawed Plasma (Research).”
